

SunTap Technologies

Free heat for your pool!

Are you paying too much to heat your pool? Would you like to extend your pool season to get more use out of it? If you answered yes to either or both of these questions, then the ideal solution for you is a solar pool-heating system installed by the professionals at **SunTap Technologies**.

SunTap can install a system in under a day, giving you the immediate benefits of collecting solar energy to heat your pool. By using solar, you offset the need to heat with natural gas, electricity, or any other fuel. Not only are you saving money, you are saving the environment.

By taking advantage of solar energy, you can **increase your pool usage by 60%***, allowing you to spend more time in your pool and have more fun with your family and friends.

Worried about the cost? This high-quality solar pool-heating system will pay for itself in fuel savings **within three years†** in our climate. The system may also be eligible for rebates. Start saving today with **SunTap Technologies!**

Buy local! SunTap installs equipment manufactured here in Ontario.

www.suntaptechnologies.com

*based on a three-month pool season adding one month before and after the season

†Based on typical meteorological data for southwestern Ontario and assuming a standard pool season of three months + two added months gained from solar heating.

How it works

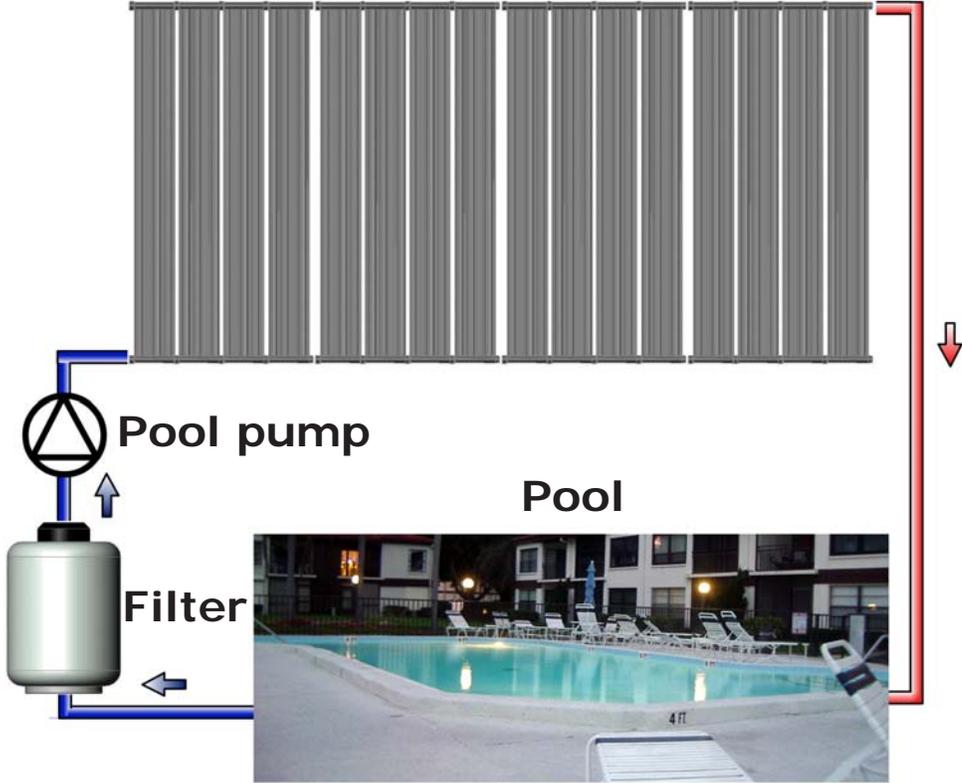

Located on the roof of your pool house or of your home, the solar collectors absorb the sun's heat and transfer it to your pool water using the existing pumping

system. An electronic controller determines automatically when to collect the available solar energy.

Collectors come in standard sizes of 4' x 8' and 4' x 10' or can be custom-sized to your needs at the Ontario facility to ensure optimum coverage.

The solar collectors installed by SunTap Technologies are designed to heat the water in your pool efficiently and safely. High-quality materials ensure that the collector rubber remains flexible and does not harden or crack over time. The 4"-wide strips allow the roof underneath to breathe, and the collectors can even lengthen the life of the roof.

Solar collectors

The system comes with a 15-year warranty and has an expected lifetime of over 25 years. Although the need for repairs is not common, 100% of the components can be replaced or fixed in-place, and the system as a whole is completely replaceable.
