

SunTap Technologies

Get a charge into your car

Electric vehicles (EV) are quickly becoming popular when people are looking for a new car. Features such as **reduced operating costs** and **lower environmental impact** are driving up the demand. How does the car get charged, though? Plugging into a regular outlet is the standard option, but takes 8+ hours to get a full charge – not very convenient. A **charging station** on the other hand reduces charging time by **at least 66%**, meaning certain vehicles are ready to go in 2 to 3 hours.

SunTap Technologies is the local dealer for Sun Country Highway, providing equipment and installation for residential and commercial charging stations.

Highlights:

- ◆ Can be mounted on wall or pedestal
- ◆ Smallest EV charger footprint on the market
- ◆ Rated for outdoor use (NEMA 4)
- ◆ 50% rebate from province on cost of charger and installation
- ◆ Hardwired for safety: no dangerous plugs for prying little fingers
- ◆ No buttons: just plug and charge!
- ◆ Enjoy low-cost ongoing operation of your electric vehicle
